

Battery De-Sulfater Warranty

Battery De-Sulfater will restore the normal action in the cells of lead acid batteries 100% of the time if the batteries are mechanically sound but are just sulfated (mechanically sound meaning batteries that still barely work and that do not have a cracked and / or broken plate or connection and that the battery plates are not totally used up).

If your 12 volt battery is below 11 volts or your 6-volt battery below 5 volts then it is best to just replace the batteries. Battery De-Sulfater works every time in any mechanically sound battery but cannot fix, recondition or rejuvenate a battery that is totally used up.

Please follow the instructions on the website www.thermoil.com Click on Battery De-Sulfater then click on De-Sulfater Usage & Equalization Instructions.
